

Lesson Planning and Schedule Maintenance Lifecycle

1. Prepare Academic Content

Teacher creates or imports subjects, parses syllabus text, and stores units, chapters, lessons, and lesson metadata.

2. Configure Lesson Plan

Teacher selects institution, section, date range, lesson scope, meeting patterns, and term-related planning constraints.

3. Generate Schedule

Scheduler creates slots, applies blackout information, derives lesson and assessment blocks, places them by term, and persists output.
Outputs: lesson plan record, slots, blocks, warnings, metrics, and calendar-ready ordering.

4. Review and Maintain

Teacher reviews monthly and daily calendars, creates manual blocks, edits or deletes blocks, and monitors plan detail information.

5. Adapt to Disruption

When dates become unavailable or restored, the system rebalances the plan, preserves protected state where possible, and exposes
